## DESCRIPTION

### Cabin Air Ionisation

This technology helps the well-being of both driver and passenger alike. It improves the air quality within the cabin, and can help reduce allergens, viruses, bacteria and odours. It does so by decomposing harmful substances, thus helping to cleanse the air in the cabin. It can be switched on or off.

## DYNAMICS

### Adaptive Dynamics

Delivers both precise dynamics and a supple ride by monitoring wheel position and body movements. The system constantly analyses acceleration, steering, throttle and brake pedal activity. The electronically controlled dampers adjust 100 times a second to optimise the suspension settings and provide the optimum balance between comfort, refinement and agility at all times.

## DRIVER ASSISTANCE

### 360° Surround Camera

Using the four digital cameras discretely placed around the vehicle, providing a 360° bird's eye view on the Touchscreen. With the capacity to display several different views at the same time, this helps with various manoeuvres from parking by a kerb, to getting in and out of tight spaces and junctions.

Vehicles shown are from the Land Rover Global range. Specifications, options and availability will vary between markets and should be verified with your local Land Rover Retailer. The figures provided are official EU Test Figures. For comparison purposes only. Real world figures may differ.

WLTP is the new official EU test used to calculate standardised fuel consumption and CO<sub>2</sub> figures for passenger cars. It measures fuel, energy consumption, range and emissions. This is designed to provide figures closer to real-world driving behaviour. It tests vehicles with optional equipment and with a more demanding test procedure and driving profile .

The figures provided are NEDC2 calculated from official manufacturer's WLTP tests in accordance with EU legislation. For comparison purposes only. Real world figures may differ. CO<sub>2</sub> and fuel economy figures may vary according to wheel fitment and optional extras fitted. NEDC2 are figures calculated using a Government formula from WLTP figures equivalent to what they would have been under the old NEDC test. The correct tax treatment can then be applied.
